

EXTENDED CRI95

Extended & Standard CRI ratings.

MZ LED Lights use high quality Japanese LEDs with Extended CRI95 or Standard CRI97. Extended CRI light measurement uses 15 color samples for more accurate results. Standard CRI uses only 8 color samples.

POWERFUL & PORTABLE

MZ LED lights are very powerful and portable. Half size and half weight but more powerful than LED panels. Boost function gives extra 30% light intensity for more demanding shootings.

- MZ-LED120/Bolt LED Light is more powerful than LED300 LED Panels
- MZ-LED176 LED Light is more powerful than LED500 LED Panels
- MZ-LED336 LED Light is more powerful than LED1000 LED Panels
- MZ-LED884 LED Light is more powerful than LED2000 LED Panels

COOLING & DURABILITY

MZ LED Boards and Dimmers are made of Aluminum and they are integrated in separate Aluminum bodies fitted on aluminum Heatsinks. Heatsinks are attached to the aluminum bodies and heat is transferred to the environment in the best possible way. We have used Aluminum material for the best possible cooling of both LED board and Dimmer. So you can use your MZ LED lights in warm places with same efficiency.

Our unique cooling technique increases the lifespan of your MZ LED lights without the need of noisy fans which cause sound interferences in audio systems.

Choose
Round-shaped MZ
LED lights instead
of LED Panels.

Round-shaped MZ LED lights have an 115-degree light beam for wide angle lighting and uniformity. In that way you can use your light closer to your subject with great efficiency. Optional high quality lenses for spot lighting are available!

MZ LED lights are powerful, small and portable. Half size and half weight than LED panels. You can fit up to five units in a single bag.

In MZ LED lights the Dimmer is separated from the Light body in order the user to be able to control it remotely even when a 3.8m light stand is used.

In Round-shaped MZ LED lights you can adapt Lenses, softboxes, barndoors, umbrellas, various color & diffusion gels.

MZ LED Lights with various color & disffusion gels. (Special steel blue, lavender & straw tint)

- Boost Function
- 2 Mode Selection

*Dimmer is separated from the Light body for better cooling and the user to be able to control the MZ LED light remotely even when a 3.8m light stand is used.

STUDIO LIGHTING

With our DMX controller you can control your MZ LED lights remotely up to 150m away with a DMX lighting Console. DMX address of each LED light is set from the DMX menu of the Dimmer. With the DMX lighting Console you can control the temperature and the intensity of your MZ LED lights separately. This is an ideal solution for Studios and theaters.

For cost effective solutions, when you use the Standard Dimmer, you can control your MZ LED lights up to 30m away by using cable extension. No extra equipment is required.

*We don't use fans for the cooling, so there are no sound interferences when you use your MZ LED lights.

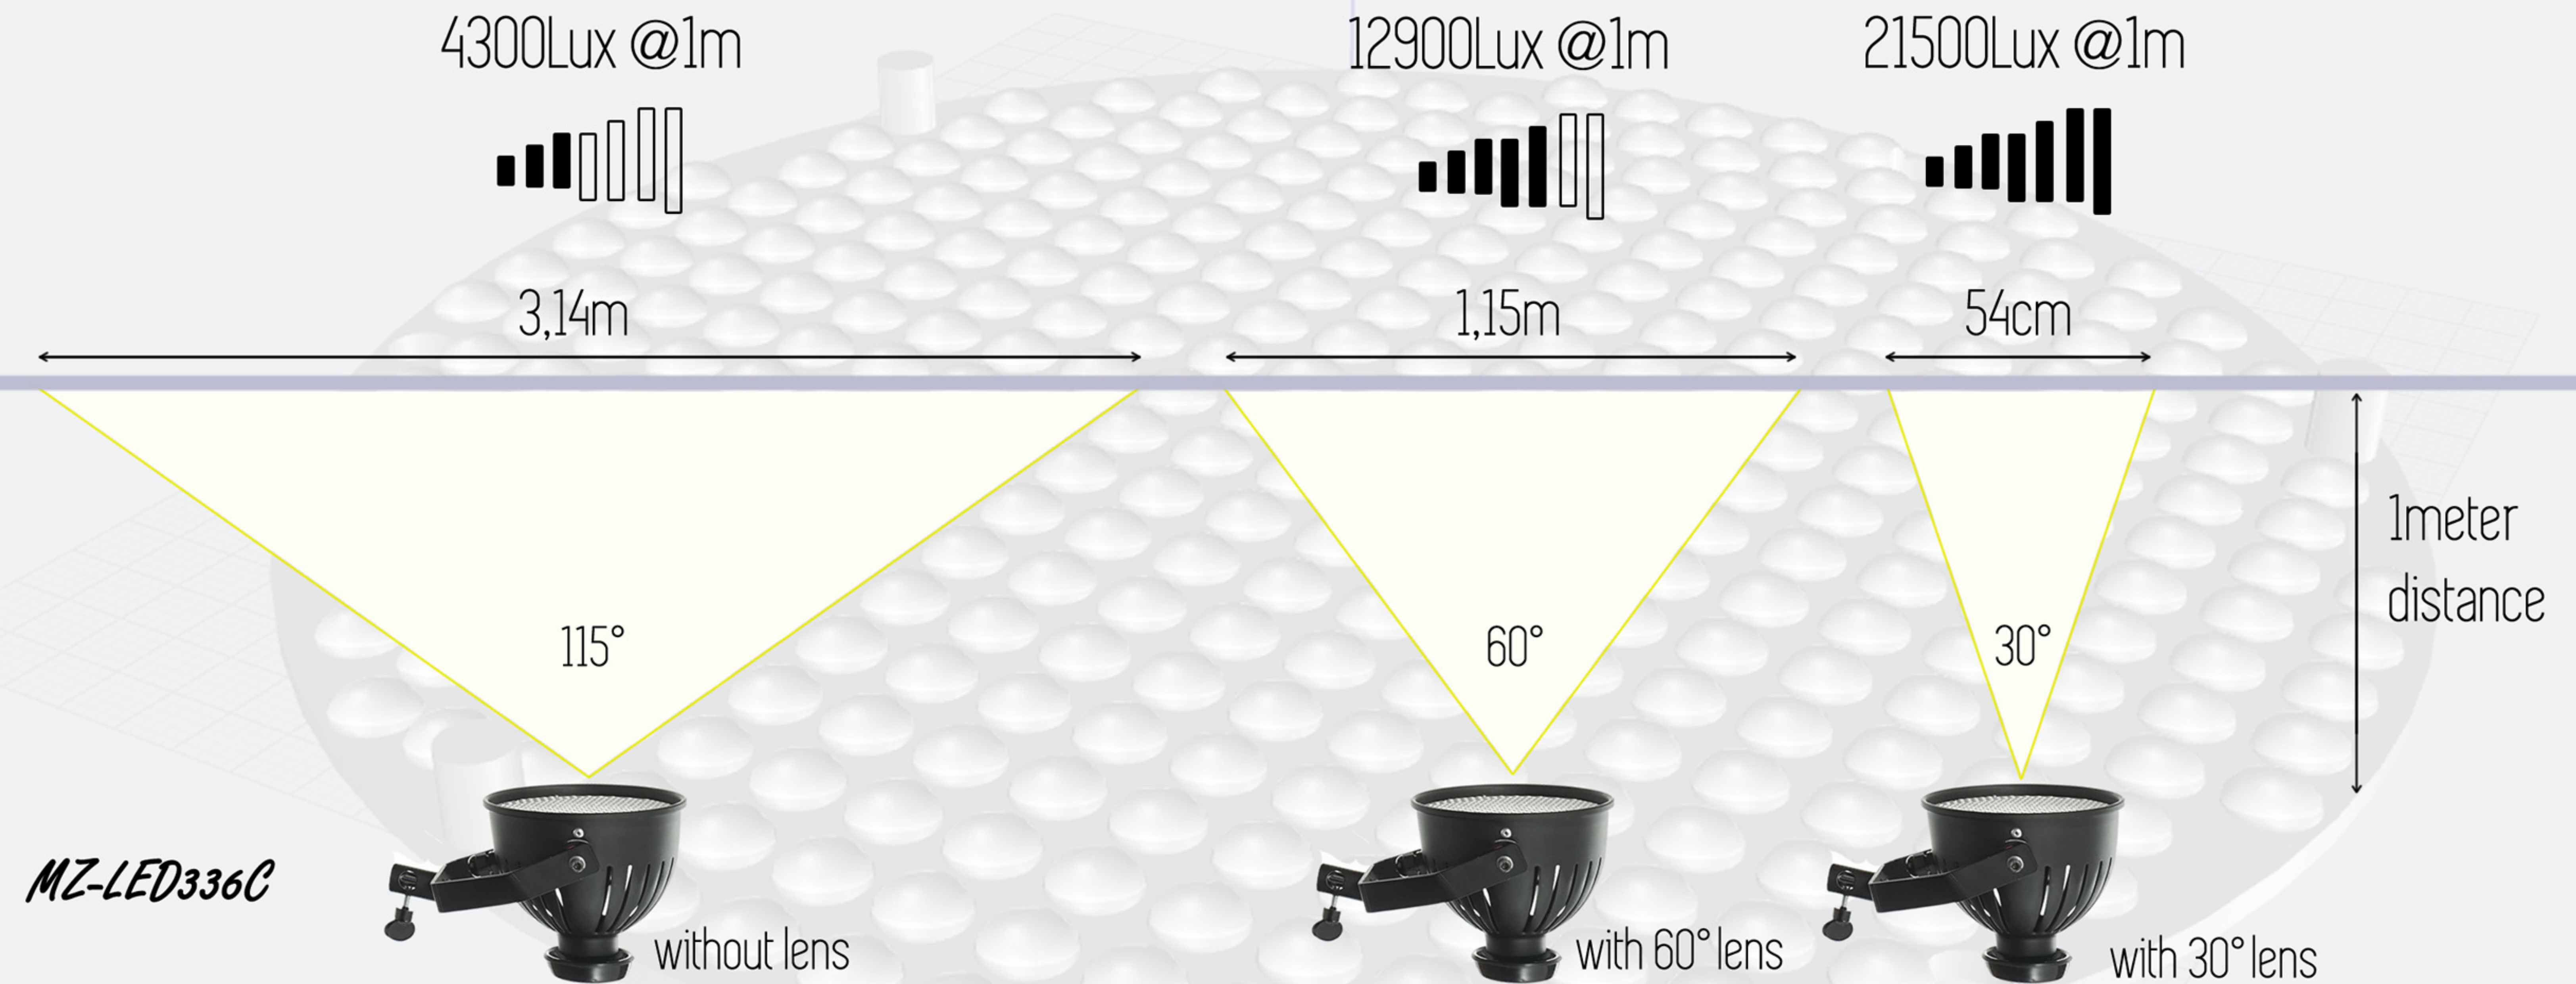

LENSES

A hand is holding a clear, dome-shaped lens over a black LED light fixture. The light fixture has a grid of yellow LEDs on its face. The lens is being held in front of the light, demonstrating how it can be attached to the fixture. The background is white.

Round shaped MZ LED lights have an 115 degree light beam for wide angle lighting and uniformity. What if you need spot lighting? Now you can choose one of the MZ Lenses to change the light beams according to your needs.

We produce two high-quality optional lenses for our LED lights. 60-degree and 30-degree lenses. These lenses are detachable, so you can use 115, 60 or 30-degree light beams with your MZ LED lights. The 60-degree lens increases the intensity of the light by 3 times in long distances and the 30-degree lens increases the intensity of the light by 5 times.

Light intensity with optional lenses

POWER

The great advantage of the MZ LED lights is that you can use different kind of Batteries using the external MZ battery adapters. These adapters can be adapted on Tripods with clamps which gives you extra stability to your light stands. We have Sony NPF, Sony Vlock and Panasonic Glock type battery adapters. These adapters are Single or Dual for extra operating hours. LED panels usually have the Battery adapters integrated on the light body which adds extra weight on the top of the tripod and leads to instability.

The MZ LED Lights are AC or battery operated. MZ-LED336 & MZ-LED176 are equipped with an XLR 4-pin Male connector 7-17V DC input. The MZ-LED884 light is equipped with an XLR 4-pin Male connector 27-35V DC input. The tiny on-camera MZ-LED120-Bolt light is equipped with a Barrel Connector 5-17V DC input.

ACCESSORIES

Softboxes

You can adapt MZ softboxes with or without Grids to your MZ LED lights. Softboxes reduce contrast, conceal skin blemishes, and soften the edges of the shadows. Grids are able to focus the light on their targets and eliminate any spilling light on the background. Dimensions: 40x40cm, 60x60cm, 90x90cm, 23x90cm and 30x120cm.

Barndoors

We have four leaf barndoors for all of our MZ LED lights. These barndoors have Gel Clips in order to put various color & diffusion gels.

Umbrellas

You can use umbrellas with your MZ LED lights. Diffusion umbrella creates a soft and even quality of light for smooth images. Reflective umbrella creates a beautiful bounced-lighting ambience with additional intensity.

LIGHT KITS

- Single MZ light Kits include one LED light with accessories.
- Multiple MZ light Kits include Lights of the same model with tripods, bags and other accessories.
- Mixed MZ light Kits include Lights of different models with tripods, bags and other accessories.
- Kit2 includes two lights, Kit3 three lights, Kit4 four lights, Kit6 six lights and Kit8 eight lights.

- Basic Kit includes Diffuser and Supplier.
- Essential Kit includes Softbox, Supplier, Clamp kit, DTAP cable and Pouch.
- Power Kit includes Battery adapter, Supplier, Diffuser, Barndoors, Clamp kit and Pouch.
- Deluxe Kit includes 30° & 60° lenses, Supplier, Diffuser, Barndoors, Clamp kit, DTAP cable and Pouches.
- Full Kit includes Supplier, Diffuser, Barndoors, Clamp kit, DTAP cable and pouch.

SUPPORT

MZ LED lights have a 2-year standard warranty from the date of purchase.

Our technicians can fix your LED light immediately without any delay.

Immediate replacement of each LED, piece by piece with special tools.

We keep stock of all spare parts, boards and LEDs for immediate repair.

We keep log files and records for your lights for more efficient repairings.

We can show you Lighting techniques and how to use your MZ LED lights.
